Laura Fratiglioni is currently employed as professor in geriatric epidemiology at the Aging Research Center (ARC), Department of Neurotec, Karolinska Institutet, Stockholm, Sweden. She is a medical doctor, specialised both in neurology and epidemiology. She is involved in scientific, clinical and pedagogical commitments.

At present, her major research field is epidemiology of neurodegenerative diseases in the elderly:

She is the scientific coordinator of the Kungsholmen Project on Aging and Dementia, the co-investigator of the project "Harmony: a twin study on dementia", and the principal investigator of The SNACKungsholmen population study. Her scientific production has led to 141 papers published as original contributions in peer-reviewed journals, 17 review papers, and 11 book chapters.

Under her supervision, 8 PhD students had completed their studies since 1996; and at the moment she is supervising five students. She serves regularly as reviewer to clinical (The Lancet; Aging, Journal of Neurology, Neurosurgery and Psychiatry; The Gerontologist, European Journal of Neurology) and epidemiological journals (Journal of Clinical Epidemiology, Am J of Epidemiology, Neuroepidemiology). She has held grants regularly as a principal investigator since 1996 at several of the major research councils in Sweden. She has been awarded by the Italian Neurological Association with Luigi Amaducci Award.
